SESSION Session 1: satellite tracking and scheduling

TYPE Poster

TITLE Information on the development of new equipment for the control of the laser station 1824 - Golosiiv-Kyiv.

ABSTRACT

The structure of the developed equipment includes the following parts:

- Telescope control module;
- time base module
- time synchronization module
- time gate module for event timer A31
- communication modules with PC
- the module for generating START and STOP signals.

The development status and test results of individual modules are presented.
